## **TikTok could face £27m fine for failing to protect children's privacy**

### **Investigation finds video-sharing app may have breached UK data protection law between 2018 and 2020**

TikTok is facing the prospect of a £27m fine for failing to protect the privacy of children, the UK's data watchdog has said. An investigation conducted by the Information Commissioner's Office (ICO) found the video-sharing app may have breached data protection law between May 2018 and July 2020. [ ... ]

If TikTok were to be fined this amount it would be the largest in the ICO's history, exceeding the record £20m handed to British Airways two years ago after an incident in 2018 that saw the personal details of more than 400,000 customers compromised by hackers. The maximum fine the ICO can impose would be based on a calculation of 4% of TikTok's global annual turnover.

The regulator's "provisional view" is that TikTok may have processed the data of children under the age of 13 without parental consent, and failed to provide proper information to its users in a "concise, transparent and easily understood way". The ICO also said TikTok may have processed special category data – which includes ethnic and racial origin, political opinions, religious beliefs, sexual orientation, trade union membership and genetic, biometric or health data – without legal grounds to do so.

The information commissioner, John Edwards, said: "We all want children to be able to learn and experience the digital world, but with proper data privacy protections. Companies providing digital services have a legal duty to put those protections in place but our provisional view is that TikTok fell short of meeting that requirement."

The ICO said it had not reached a conclusion as to whether there had been a breach of data protection law, or if a financial penalty would be imposed.
