Support annexe à télécharger : Audio Vidéo

Ce support d'épreuve intègre des éléments en couleur. S'il est choisi par l'évaluateur, il est nécessaire que chaque élève dispose d'une impression en couleur.

**L'usage de calculatrice, dictionnaire, appareil connecté est interdit.
Ce support d'épreuve doit être rendu à l'examineur à la fin de l'épreuve**

** cf. programme et définition de l'épreuve de langue selon l'arrêté du 22 juillet 2008*

AI will affect 40% of jobs and probably worsen inequality, says IMF head

Artificial intelligence will affect 40% of jobs around the world and it is “crucial” that countries build social safety nets to mitigate the impact on vulnerable workers, according to the head of the International Monetary Fund.

5 AI, the term for computer systems that can perform tasks usually associated with human levels of intelligence, is poised¹ to profoundly change the global economy with advanced economies at greater risk of disruption.

10 Analysis by the IMF, says about 60% of jobs in advanced economies such as the US and UK are exposed to AI and half of these jobs may be negatively affected. But the technology will also help to enhance some humans’ productivity as AI improves their performance, it said.

According to the IMF, the safest highly exposed jobs are those with a “high complementarity” to AI, meaning the technology will assist their work rather than displace it entirely. This includes roles with a high degree of responsibility and interacting with people – such as surgeons, lawyers and judges.

15 High-exposure jobs with “low complementarity” – meaning the potential for being displaced by AI – include telemarketing, or cold-calling people to offer goods or services. Low-exposure occupations include dish washers and performers, the IMF said.

20 AI jobs exposure is 40% in emerging market economies – defined by the IMF as states including China, Brazil and India – and 26% for low-income countries, with an overall total of just under 40%, according to the IMF.

Generative AI – the term for technology that can produce highly plausible text, images and even voice from simple hand-typed prompts – has risen up the political agenda since the emergence of tools such as the ChatGPT chatbot.

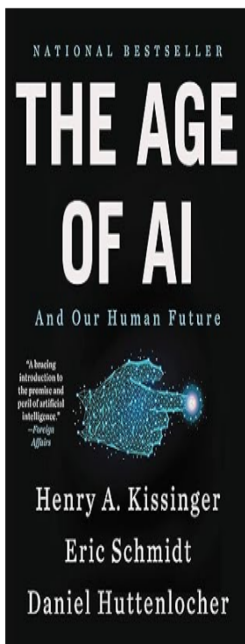

25 Kristalina Georgieva, the IMF managing director, said AI’s ability to affect highly skilled jobs means that advanced economies face greater risks from the technology. She added that in extreme cases some jobs in major economies could disappear.

30 Last year, the Organisation for Economic Co-operation and Development said the occupations at highest risk from AI-driven automation were highly skilled jobs and represented about 27% of employment across its 38 member countries, which include the UK, Japan, Germany, the US, Australia and Canada. It said skilled professions such as law, medicine and finance were most at risk.

Three of the world's most accomplished and deep thinkers come together to explore Artificial Intelligence (AI) and the way it is transforming human society—and what this technology means for us all.

Generative AI is filling the internet with false information. Artists, writers, and many other professionals are in fear of their jobs. AI is discovering new medicines, running military drones, and transforming the world around us—yet we do not understand the decisions it makes, and we don't know how to control them.

In *The Age of AI*, three leading thinkers have come together to consider how AI will change our relationships with knowledge, politics, and the societies in which we live. *The Age of AI* is an essential roadmap to our present and our future, an era unlike any that has come before.
